

Amendments to the Written Description

Please amend the written description as follows:

The paragraph beginning on page 3, at line 11:

The aims described above have been achieved through the method of manufacturing and assembling a volumetric compressor ~~according to claim 4 as described herein~~, and through a volumetric compressor the main features of which are made according to such a method.

The paragraph beginning on page 7, at line 5:

As to the coupling element 12, 13 for connection to a suction pipe for the carrier fluid at low pressure and the coupling element 17, 18 for connection to a delivery pipe for the carrier fluid at high pressure, they may be constituted, according to the customer's needs, by a suction valve and/or a delivery valve or, alternatively, by a suction coupling and/or a delivery coupling.

The paragraph beginning on page 3, at line 15:

Advantageously, the possibility to connect the same compressor body to two different types of suction ~~head~~ heads on the suction side and to two different types of delivery ~~head~~ heads on the delivery side makes it possible to achieve all the compressor configurations required by the market, using five different components, instead of making four separate compressors.
